

SOWBARNIKA

DATA ANALYST · FORMERLY AEROSPACE ENGINEERING

Malaysia (open to remote & global roles, targeting Switzerland) | github.com/Sowbarnika24 | your.email@example.com

Summary

Career transitioner moving from aerospace engineering into data analytics, with a portfolio of self-driven projects using real public datasets. Comfortable across the analytics pipeline — cleaning messy data, exploratory analysis, building models, and communicating findings clearly. Bringing engineering-grade rigor and structured problem-solving to data work.

Skills

ANALYTICS TOOLKIT	ENGINEERING BACKGROUND
Python (Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn)	CATIA V5
SQL	ANSYS
Excel (incl. PivotTables, XLOOKUP, dashboards)	AutoCAD
Tableau	MS Project (MSP)
Jupyter Notebook	

Projects

Restaurant Recommendation System

Dataset: Zomato Restaurant Data

Built a content-based recommendation engine that suggests restaurants based on cuisine type, location, pricing, and customer ratings.

- Cleaned and engineered features from inconsistent restaurant metadata (cuisines, cost, ratings)
- Built similarity-based recommendation logic to surface relevant restaurants per query
- Published a write-up of the approach and findings on LinkedIn

Tools: Python, Pandas, Scikit-learn, Jupyter Notebook

App Rating Prediction

Dataset: Google Play Store Data

Developed a predictive model estimating app ratings from attributes such as category, size, installs, and reviews.

- Handled messy real-world data: missing values, inconsistent formatting, and encoding issues
- Performed exploratory analysis to identify which features most influence app ratings
- Trained and evaluated a regression model; documented findings on LinkedIn

Tools: Python, Pandas, Seaborn, Scikit-learn

Retail Sales EDA

Dataset: Superstore Sales Data

Conducted an end-to-end exploratory data analysis on retail sales data to uncover trends in regional performance, category profitability, and seasonal demand.

- Cleaned and structured raw transactional data for analysis

- Visualized sales and profit trends across regions, categories, and time periods
- Surfaced actionable insights on which segments drive profitability

Tools: Python, Pandas, Matplotlib, Excel
